Summary

As a Frontend Engineer, my primary focus revolves around TypeScript and JavaScript. Nonetheless, my experience extends beyond these languages. What I find most rewarding about this role is the chance to forge meaningful connections between users and the digital products they depend on. This opportunity allows me to bridge the gap between code and user experience, ensuring that our applications not only function flawlessly but also provide value and satisfaction to our users.

Work Experience

My Cloud PA
FRONTEND ENGINEER

Dublin, Ireland
Mar. 2022

· Developing management, finance and various systems with NX workspace and Angular.
· Built User Interfaces for clients without compromising functionality for aesthetics
· Using front end object oriented programming and State Management to develop client server systems.

Featured Project

NGTABLESCULPT | NPM LINK ⬈

An Angular component library designed for efficiently handling substantial volumes of data. I developed this library out of sheer necessity, as I frequently encountered the need for data tables in my projects. Existing libraries often proved too restrictive and challenging to customize to my specific requirements. It's precisely this experience that inspired me to make it available to the broader community.

PERSONAL WEBSITE | Website Link ⬈

This is my personal website, meticulously crafted with NextJS, where you can discover in-depth information about me, explore my portfolio, and delve into my creative journey and projects.
